# The faces of R-Ladies

by Lucy McGowan and  
Maëlle Salmon

## About

This is the **papr** app. Think of it as "Tinder for pre-prints". If you don't know what Tinder is, think of it as a web app for collecting gut-reactions to pre-prints from the scientific community. For the moment the app only displays papers on [bioRxiv](#), but if there is demand we may consider adding other pre-print servers as well.

### Your data and research

When you sign in and swipe with papr we store a two things:

- An anonymized user id.
- Your decisions on the abstracts you swiped.

We will be using this data (in future releases) to help figure out what type of papers you like. Knowing this information will allow us to show you papers that are more relevant to your interests but also will let you find other researchers that are most like you (if you choose to make your identity known to the app). A kind of academic sphere of interest.

We collect information on your ratings of academic papers on biorxiv through this service. These data may be analyzed and released in anonymized form. We will not release data labeled with your social media or gmail accounts. However, you should be aware that it may be possible to identify you from your ratings of papers (we don't know we haven't tried).

### Author

It was built by [Jeff Leek](#), [Lucy D'Agostino McGowan](#), and [Nick Strayer](#) as an example of the sort of thing we hope to build with the Johns Hopkins Data Science Lab. If you want a web or mobile app prototyped, consider submitting an app idea for free prototyping at our [Prototyping Shop](#).

### Terms

This app is provided solely for entertainment of the scientific community and may be taken down at any time with no notice because Jeff gets tired of it. It is provided "as is" and is not guaranteed to do anything really. Use at your own risk and hopefully enjoy :).

### WSDS R-Ladies Panel: Improving gender diversity in a male-dominated community (PANEL)

Sat, Oct 21, 10:00 AM - 11:30 AM  
TBD

### WSDS R-Ladies Panel: Improving Gender Diversity in a Male-Dominated Community (303812)

Jenny Bryan, Rstudio & University of British Columbia

Mine Cetinkaya-Rundel, Duke University

\*Lucy D'Agostino McGowan, Vanderbilt University

Gabriela de Queiroz, SelfScore

Mine Dogucu, Ohio State University

Katherine Scranton, UCLA

Jennifer Thompson, Vanderbilt University

**Keywords:** panel, gender diversity, R Ladies

R-Ladies is a worldwide organization whose mission is to promote gender diversity in the R community. We are interested in presenting a panel of regional leaders in the R-Ladies movement. We will discuss topics such as diversity data in the R community, best practices for starting up a meetup in your own community, best practices for running and continued success of a meetup in your community, and funding opportunities. We will also diagnose different obstacles and discuss how we attack them, for example increasing women's competence versus confidence versus recognition in the R community. Finally we will provide resources and details about how to get involved with local meetups.

## Summer of Data Science 2017

Since Memorial Day in the U.S. is the unofficial start of the summer season, I figured today would be a good time to launch the SUMMER OF DATA SCIENCE 2017!!

The Summer of Data Science is a commitment to learn something this summer to enhance your data science skills, and to share what you learned. (Those of you in the Southern Hemisphere will have to pick up the excitement when we're winding down during our fall/your spring and keep it going! Or, join us during your Winter of Data Science!)

For those of you who haven't been following me for years, a hashtag I started back in 2015, #SoDS, is actually one of the things that started growing my twitter following. Here's the history:

[Coming up with the hashtag](#)

[1st month of tweets, May 2015 Storified](#)

[June 2015 #SoDS Storify](#)

Unfortunately, I didn't keep up the 'Storification' after that, but you get the idea. It brought a bunch of us together to share our learning progress. We learned from each other, encouraged each other, and most of all geeked out about data science together!

I didn't launch one last year, because I was starting a new job and taking a break from recording the podcast, and just didn't want to take on too much. But I missed it, so I didn't want to let another year pass without a Summer of Data Science, so we're going to do it together again this year!

So, here are the only "rules":

ABOUT

Documenting my path from "SQL Data Analyst pursuing an Engineering Master's Degree" to "Data Scientist"

Search for:

SPONSORED BY  DataCamp

*- Learn By Doing -*

R, Python, ggplot2, dplyr, pandas & more.

[Start Free Course](#)

# How to participate in the #SoDS17

1. Pick a thing or a short list of things related to data science that you want to learn more about this summer.
2. Make a plan to learn it (like an online course, a practice project, etc.).
3. Share that plan on social media, then post updates as you make progress, with the hashtag #SoDS17.

## 4. Swirl
